## CERAMIC DENTAL IMPLANT SOLUTIONS

Thanks to excellent biocompatibility and enhanced aesthetic outcome more and more implantologists and patients show a preference for ceramic implant materials.\*

Based on 45 years of development, manufacturing and testing of customized ceramic medical devices, CeramTec has become a trusted partner to develop your innovative zirconia implant solution.

### Strong

All DENSILOX® ceramic materials demonstrate high hardness as well as high fracture strength and toughness.

### Aesthetic

You can choose between a range of colours for an individual solution and for the highest aesthetic demand: natural white, ivory or 'gingiva pink'.

### Metal-free

All our ceramic materials are 100% metal-free.

## Less Bacteria Adhesion on Ceramics

Studies have shown that ceramic surfaces have low potential of bacterial colonization. The reduction of peri-implant plaque formation may simplify hygiene for the patient and prevent gum inflammations.\*
